Hao(Leo) Zhong

Computer Engineering
University of Waterloo

zhong5930@gmail.com
leoz123.github.io
haozhong1234
LeoZ123

Technical Skills

- Languages: Java, C++, Python, HTML, JavaScript, AngularJS, CSS, VHDL, VB
- Database: Oracle, MySQL, PostgreSQL
- Tools: Eclipse, NetBeans, Visual Studio, Tomcat, Gradle, Quartus, Axure RP, Matlab
- Operating Systems: Linux, Windows

Qualifications

- Knowledge of MVC, J2EE, GitHub, SVN, jQuery, GUI and experience in database design
- Great understanding of Software Development Life Cycle and writing test cases
- Outstanding team player and quick learner with effectively communication skills
- Enhanced problem solving and researching skills in Student Leadership Certificate Program and developed in work and volunteer experiences

Work Experience

January–current 2017 **Software Developer**, *HubHead Corp.*, Markham, ON.

- Applied Java and Spring MVC knowledge to enhance project performance
- Developed font-end skills by editing UI page using HTML, CSS, AngularJS and TypeScript
- Enhanced database skills by using PostgreSQL to increase searching performance
- Improved testing and quick learning skills by developing selenium test cases
- Cooperated and worked effectively with group members in a team of 5 members

May–August 2016 **Software Developer**, *Yunku Technology Co Ltd*, Qinhuangdao, China.

- Programed particular functions (such as exam paper creator, exam and user management) for online learning system by using Java, JSP, SQL and jQuery
- Enhanced database skills by writing MyBatis to add, delete, update and search data from database
- Developed user interface by JSP and underdstood HTML, JavaScript and AJAX
- Understood MVC structure by developing projects from user interface to database level

Relevant Projects

April 2016 **Navigation Project**.

- Programmed by Java language for Android devices to implement a path-finding algorithm which can guide a user to a destination and correcting the user's wrong turns along the way
- Designed algorithms for tracking user's position on a model of the physical world
- Improved testing skills by testing the program with unit, system and stress testing methods

April 2016 **Traffic Light Controller Project**.

- Designed the project with VHDL to simulate traffic light controller system on Altera FPGA board
- Developed schematic and VHDL design by understanding logic gates and VDHL language
- Enhanced combinational and sequential circuits design abilities by designing logic circuits and optimizing state diagrams
- Improved optimizing abilities by using simulation tools and RTL verification to analyze simulation results

December 2015 **Web Server Analysis Project**.

- Programmed by C++ language to handle client requests with different priorities (a light version of Discrete Event Simulation)
- Improved debugging skills by designing comprehensive test cases and test the program to ensure accurate operation
- Developed programming and self-studying abilities by learning new grammars and algorithms
