

Hao Zhong

Computer Engineering | University of Waterloo

Website: leoz123.github.io | Github: LeoZ123 | LinkedIn: haozhong1234

zhong5930@gmail.com

Technical Skills

Proficient:

Java • C++ • JavaScript • HTML • CSS • AngularJS

Intermediate:

Python • VHDL • Matlab

Familiar:

Oracle • MySQL • PostgreSQL • Android

Tools:

Eclipse • NetBeans • Visual Studio • Tomcat • Gradle •
Quartus • Axure RP

Operating Systems:

Linux • Windows

Qualifications

- Knowledge of MVC, J2EE, GitHub, SVN, jQuery, GUI and experience in database design
- Great understanding of Software Development Life Cycle and writing test cases
- Outstanding team player and quick learner with effectively communication skills
- Passionate new technologies (AI) and working as localization lead in UW Autonomous Vehicle Team
- Enhanced problem solving and researching skills in Student Leadership Certificate Program and developed in work and volunteer experiences

Work Experience

Software Developer | OPENTEXT CORP. | WATERLOO, ON | JANUARY-- APRIL 2018

- Worked in Web-Scale team for cloud share and collaborate project
- Implemented new features by Node.js and added relative tests by Mocha
- Created and improved core API
- Enhanced project performance and fixed bugs

Software Developer | HUBHEAD CORP. | MARKHAM, ON | JANUARY-- APRIL 2017

- Applied Java and Spring MVC knowledge to enhance project performance
- Developed front-end skills by editing UI page using HTML, CSS, AngularJS and TypeScript
- Enhanced database skills by using PostgreSQL to increase searching performance
- Improved testing and quick learning skills by developing selenium test cases
- Cooperated and worked effectively with group members in a team of 5 members

Software Developer | YUNKU TECHNOLOGY CO LTD | QINHUANGDAO, CHINA | MAY--AUGUST 2016

- Programed particular functions (such as exam paper creator, exam and user management) for online learning system by using Java, JSP, SQL and jQuery
- Enhanced database skills by writing MyBatis to add, delete, update and search data from database
- Developed user interface by JSP and understood HTML, JavaScript and AJAX
- Understood MVC structure by developing projects from user interface to database level

Relevant Projects

Navigation Project | APRIL 2016

- Programmed by Java language for Android devices to implement a path-finding algorithm which can guide a user to a destination and correcting the user's wrong turns along the way
- Designed algorithms for tracking user's position on a model of the physical world
- Improved testing skills by testing the program with unit, system and stress testing methods

Traffic Light Controller Project | APRIL 2016

- Designed the project with VHDL to simulate traffic light controller system on Altera FPGA board
- Developed schematic and VHDL design by understanding logic gates and VHDL language
- Enhanced combinational and sequential circuits design abilities by designing logic circuits and optimizing state diagrams
- Improved optimizing abilities by using simulation tools and RTL verification to analyze simulation results
